Download Indian stock market paid courses?. by. market-related works in Tamil,.How important is sales growth for India's economy? Consolidating the ideas in the previous blog post, let us now proceed to review the historical relationship between real GDP growth and sales growth. As indicated in the previous blog post, most of the academic literature reviewed assumed a positive correlation between the two variables. However, the scatter plot in the previous post showed a less than linear relationship, and a large percentage of the observations did not fall on the line of equality of the regression. Before delving into the statistical analyses of the scatter plot data, we take a look at the following chart: Clearly, the relationship between real GDP growth and sales growth is not directly proportional. In fact, the relationship is clearly positive, and although the regression line is visibly below the equality line, not all observations lie exactly on the line. In addition, we can observe that the correlation coefficient is actually larger than 1. This implies that there is some level of serial correlation in the data (i.e. the observations are not independent and are not random samples from a multivariate normal distribution). This also suggests that there is some economic effect in the relationship between f678ea9f9e
